

Standardised Testing for Language Schools

password

About Password testing

Password online tests are used by employers, schools, colleges and universities who require accurate and reliable standardised English language assessment.

Since their launch in 2008, language schools have used Password tests to assess both employees of their corporate clients and individual students. As Password tests are aligned to the CEFR, test takers receive valuable independent certification which can be used to provide educational institutions and employers with evidence of their English language level. Language schools that offer Password certification add value to their training programmes and, in a competitive market, an edge helping generate additional income.

Language schools running training programmes for large corporate clients benefit from the flexible customisation which can be made to Password tests to reflect their clients' industry or business sector.

Test Validity

Password tests are academically designed and managed by CRELLA (the Centre for Research in English Language Learning and Assessment). Founded by Professor Cyril Weir OBE, CRELLA are a research group of world leading experts in testing and assessment who are involved in the development and validation of many of the world's most renowned English language assessments including Password, IELTS, TOEFL and the Cambridge suite.

The Password Partnership

Password tests are controlled and securely delivered wherever and whenever required by our partner language schools' own staff. They are co-branded with our partners logos and can be customised according to their corporate clients and the schools' requirements. Password tests are used by our partner institutions in over 100 countries worldwide.

“Provide corporate clients and individual students with valuable CEFR aligned gold standard testing”
